

DATA MANAGEMENT & ANALYTICS

Are you wasting time looking for the information you need to do your job?

When it's time to generate a report or your boss asks you a question related to KPIs or business metrics, does it take minutes or hours to come up with the answers you need?

Make timely, informed decisions with the benefit of big data & analytics solutions that break down departmental data silos and multiply the impact of information systems you already have in place. The benefits of putting big data & analytics to work for your business include:

- Regular key performance metric updates to enable trend analysis
- Drill-down ability to examine trouble spots deeper
- Real-time data for accurate decision-making

DATA VISUALIZATION & DASHBOARDS

To do your job well, you need the right information at the right time. Unfortunately, that information lives in an ever-increasing mess of disconnected spreadsheets, systems, databases and applications. Are you ready to see better returns from your Tableau, Spotfire or Microsoft Power BI licenses?

Our dashboard designers and analytics consultants are proven experts at data integration and visualization. We'll help you answer your most critical business questions by surfacing the insights and answers hidden in your data. We help you find those insights with powerful, interactive visualizations and self-service analytics that are easy to consume and share with your colleagues and decision makers.

FLEXIBLE SERVICES MODEL

We offer a flexible services model designed to compliment the specific needs of your team.

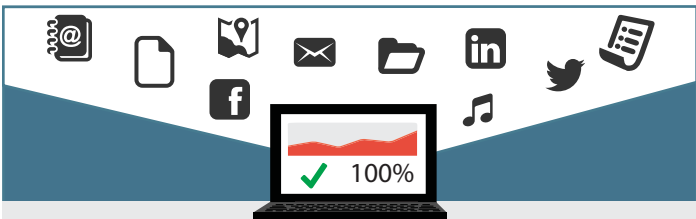

- Transform: We'll take on your entire project from design to roll-out.
- Partner: We'll work with you to provide ad hoc services as you need them.
- Train: We'll mentor your business analysts to get them up to speed on the latest dashboard reporting, big data & analytics best practices.

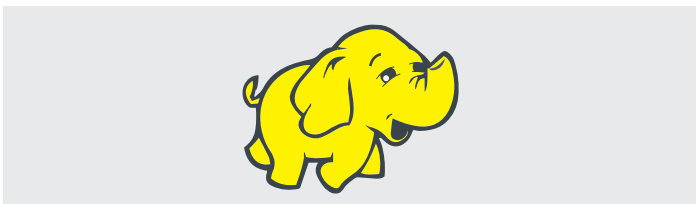

Self-Service Analytics

We help our clients' workers make faster, better business decisions, empowering them with self-service tools to explore data and share insights in minutes. Our solutions make creating intuitive visualizations as easy as drag and drop or point and select.

Big Data Management

With more data coming from more sources faster than ever, the question is: what is your Big Data strategy? Could new data sources including social, sensors, location and video help improve your business? We help you combine new and existing data sources to manage and make better decisions about your business.

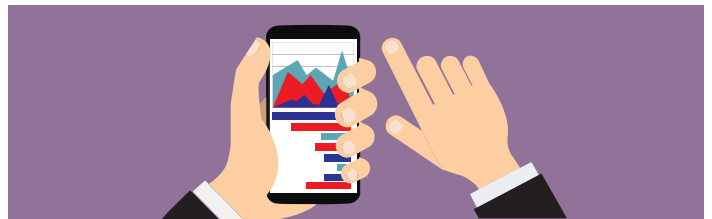

HADOOP Consulting

We'll provide implementation training and management services for Hadoop data architecture.

Operational Reporting

Tired of manually creating your daily operational reports? If so we can build auto-generated, real-time reports so your teams can better manage their work.

Mobile & Embedded

We deliver the metrics and reports you need on any device you use. We can also embed your reports into a team site or custom app.

We support the following big data & analytics technologies:

- Tableau
- Spotfire
- Microsoft Power BI
- Azure
- Hadoop
- NoSQL (MarkLogic)
